My Softener Settings Card

Fill this in once, with the person who installed or serviced your system. Tape it at the unit — future you, at 2 a.m., says thanks.

Your system

System / valve type _____

Installed on _____ **Installed by** _____

Bypass type _____

House main shutoff is at _____

Your numbers — set from your own water test

Tested hardness (grains) _____ **Valve setting** _____

Safe band (set by your tech) _____

Regeneration time _____ **Salt type used** _____

Filter size / type _____

Filter last changed _____ **Next change due** _____

Service log

Date	What was done

IN CASE OF A LEAK — DO THESE THREE THINGS

1. BYPASS FIRST. Put the softener in bypass (steps are on your quick guide). The leak stops being fed; the house still has water.
2. MAIN SHUTOFF SECOND. If water is still coming, turn off the house main (location written above).
3. THEN CALL. Aqua Pro Services — (727) 342-0091. If it is not our unit, this still just saved your floor.

The hardness rule: set the valve to what your water actually tests at — not your neighbor's number, not the number it shipped with. Too high wastes salt and water; too low lets hard water through.
